

Lab Exercise 5- Generate and Use SSH Key with Git and GitHub

Objective:

To learn how to generate an SSH key, add it to GitHub, and use it to securely connect and push code without repeatedly entering a password.

Prerequisites

- Git installed on your local machine
 - GitHub account
 - Basic understanding of Git commands
-

Step 1 – Check for Existing SSH Keys

Run:

```
ls -al ~/.ssh
```

Look for files like `id_rsa` and `id_rsa.pub`. If they exist, you may already have an SSH key.

```
mohdanas@Mohds-MacBook-Air DEVSECOPS_LAB % ls -al ~/.ssh
total 8
drwx-----  3 mohdanas  staff   96 28 Apr 21:50 .
drwxr-x----+ 50 mohdanas  staff 1600 24 Aug 16:10 ..
-rw-r--r--   1 mohdanas  staff   92 28 Apr 21:50 known_hosts
```

Step 2 – Generate a New SSH Key

Run:

```
ssh-keygen -t rsa -b 4096 -C "your_email@example.com"
```

- **-t rsa** → key type
- **-b 4096** → key length
- **-C** → comment (your GitHub email)

When prompted:

- Press **Enter** to save in the default location: /home/user/.ssh/id_rsa (Linux/Mac)
or C:\Users\- Optionally, set a passphrase for extra security.

```
mohdanas@Mohds-MacBook-Air DEVSECOPS_LAB % ssh-keygen -t rsa -b 4096 -C "mohdanas48925@gmail.com"

Generating public/private rsa key pair.
Enter file in which to save the key (/Users/mohdanas/.ssh/id_rsa):
[Enter passphrase for "/Users/mohdanas/.ssh/id_rsa" (empty for no passphrase):
[Enter same passphrase again:
Your identification has been saved in /Users/mohdanas/.ssh/id_rsa
Your public key has been saved in /Users/mohdanas/.ssh/id_rsa.pub
The key fingerprint is:
SHA256:hZCxBW0cSP07Igx+WmMs4U0CUTe7XFfJv9497Euy+bk mohdanas48925@gmail.com
The key's randomart image is:
+---[RSA 4096]---+
|      +=0+=0.. o|
|      o= 0000  +|
|      o.. o ... .|
|      +o.o .. .|
|      oS0o  ..|
|      + X . o. |
|      * o 0000|
|      .    =++|
|      ooE+|
+-----[SHA256]-----+
```

Step 3 – Start the SSH Agent

```
eval "$(ssh-agent -s)"
```

```
mohdanas@Mohds-MacBook-Air DEVSECOPS_LAB % eval "$(ssh-agent -s)"  
Agent pid 21950
```

Step 4 – Add SSH Key to the Agent

```
ssh-add ~/.ssh/id_rsa
```

```
mohdanas@Mohds-MacBook-Air DEVSECOPS_LAB % ssh-add ~/.ssh/id_rsa  
Identity added: /Users/mohdanas/.ssh/id_rsa (mohdanas48925@gmail.com)  
mohdanas@Mohds-MacBook-Air DEVSECOPS_LAB % cat ~/.ssh/id_rsa.pub  
ssh-rsa AAAAB3NzaC1yc2EAAAADAQABAAQADUFKz3P1l3in5nHDUbhkdjTsdY23csrD+e1B5Sz7Cj+z1x2jJZSNj5AsG1NjKJ40  
lqldwE/9on0Be1oyIG1qhp2S2gYoyqL47kxIKZ4CoIjqHwiye+bIq9j2cI59SE5SSZGn7emsrLCItW3WdDF4inCRsmg/3yFrepDptg  
6TDHc0G2AhojyIJo5HhxHMyBOSZKn015IhBh9qzz1B6Ln05R+q7ZP/8e7BgPVxTfDuWDCfw2s18IPDFU+EJBoKzKr9zzemtdtZebCg  
VwujtVgcLV8DhI+H6a8h7K59vRKfQaUzgtB1VCdsuIgg1hAdZHfvhY05RWVgF/Koh5Na9KWabIuw10cSbcKqH1Vh4EArm6+IBrN36t  
1w4+U2Q2/G0EJBU6J7bBtNxKnYurUPn0b+/21MiFsJlp/tyH8KGJ1HYV1mn+7U1i78NGxoxdqY7hAu1rN/6BHscIRIOrGI3Zw5o+B  
TsNLA/FGnRhr605/JPQ78oKHomeIv+6wnqFtHC7mU1zWnpaJlWRPkDSLfsqheSl+4o1BlvFyhJjFQMoWzPgJO2mQkHpJ21N2ULMzh  
/yA96RC3pXP0zNHSMXkxY8iSprgoFDzzKom3MYhUJEYAM7fBemN07e94RbmS7/haiYGAK/M/Ki91v0bDe01BAQ8DPlYXpAA0YUDQh  
9Bvq0iww== mohdanas48925@gmail.com
```

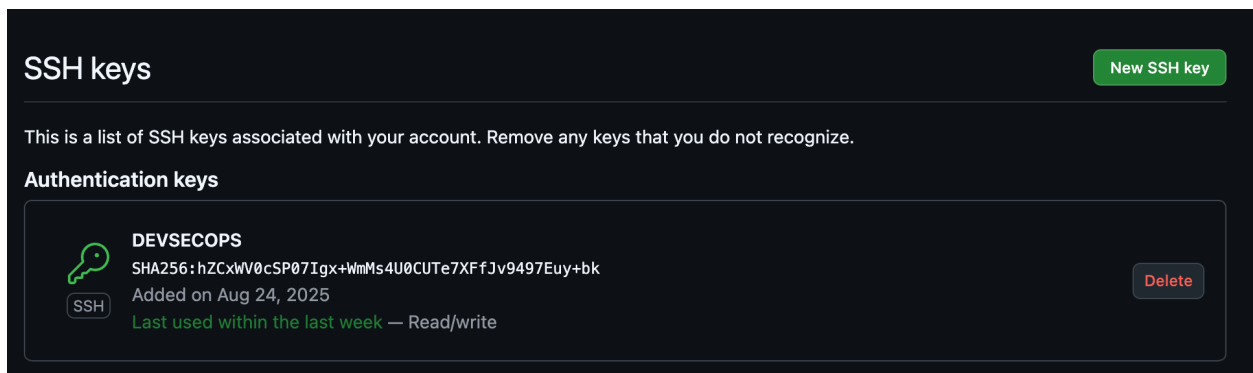

Step 5 – Add SSH Key to GitHub

1. Copy the public key:

```
cat ~/.ssh/id_rsa.pub
```

2. Log in to GitHub → **Settings** → **SSH and GPG Keys** → **New SSH key**.

3. Paste the key and save.

Step 6 – Test SSH Connection

```
ssh -T git@github.com
```

Expected output:

```
Hi <username>! You've successfully authenticated, but GitHub does not provide shell access.
```

```
Hi mohdd-anas! You've successfully authenticated, but GitHub does not provide shell access.
```

Step 7 – Use SSH to Clone a Repository

```
git clone git@github.com:<username>/<repository>.git
```

Now you can pull and push without entering your username/password.

```
[mohddanas@Mohds-MacBook-Air DEVSECOPS_LAB % git clone git@github.com:mohdd-anas/exp3.git
Cloning into 'exp3'...

Receiving objects: 100% (27/27), 1.80 MiB | 1.63 MiB/s, done.
Resolving deltas: 100% (6/6), done.
```

Use Case

Scenario:

An organization's developers often need to push code to GitHub multiple times a day. Using SSH keys eliminates the need to repeatedly enter credentials, while maintaining secure, encrypted communication between the developer's machine and GitHub.

Table – HTTPS vs SSH for GitHub

Feature	HTTPS	SSH
Authentication	Username & password / token	SSH key pair
Convenience	Requires login each session	No password once key is added
Security	Encrypted, but password-based auth	Encrypted, key-based authentication
Best For	Occasional access	Frequent development work
